

# Project Retrospective

Points possible: 50

Category	Criteria	% of Grade
Areas for Improvement	Student identified true areas for improvement as well as plans to make improvements a reality.	25
Areas of Accomplishment	Student accurately identifies areas that he/she succeeded in and outlines plans to continue the success.	25
Organization	Thoughts are concise and clear.	25
Critical Thinking	Student shows deep thought in the expressed ideas.	25

**Instructions:** In the below areas, identify struggles you ran into as a team or as individuals and list them under Areas for Improvement. Tell how you plan to improve in these areas. Write a list of accomplishments under Areas of Accomplishment. Push this document to your GitHub repository for this week. Lastly, in the Learning Management System, click the “Add Submission” button and paste the URL to your GitHub repository.

## Areas for Improvement:

-Finding the solutions myself instead of always asking for help. I feel like once I get stuck, I can't seem to figure a way out of it. I do a ton of research, but I still need to ask the teacher or others for help. I know I will have to solve more problems on my own in a job, and I am a little intimidated by it.

-I still have a lot to learn in Java and need to keep practicing. I sometimes forget little things because I haven't reviewed them in a while.

## Areas of Accomplishment:

-Finishing the API and having no infinite loops! I was so proud that Rob and I came up with a solution, and it works!

-I am pleased that I grasped SQL really fast and love it. I used to work with databases a lot and love how SQL works and creating queries to find everything I need.

**What is your favorite thing you learned this week?**

-I think my determination to get everything right and not just say, “oh well, this little loop doesn’t matter in the end.” I could have left the Reservations portion of the API as is because SQL was still recording the information, but I REALLY wanted PostMan to work.

-Overall, I feel SO accomplished that I finished this course. Do I feel like I am ready for a job - probably not, but I now have the groundwork to start refining my craft.
